APPROVAL OF STATE ENGINEER

This is to certify that I have examined the foregoing application, and do hereby grant the same, subject to the following limitations and conditions:

The amount of water to be appropriated shall be limited to the amount which can be applied to beneficial use, and not to exceed 6.4 cubic feet per second.

Actual construction work shall begin on or before June 25, 1921
Proof of commencement of work shall be filed before July 25, 1921
Work must be prosecuted with reasonable diligence and be completed on or before July 25, 1925
Proof of completion of work shall be filed before July 25, 1925
Application of water to beneficial use shall be made on or before June 25, 1927. Proof of the application of water to beneficial use must be filed with State Engineer on or before July 25, 1927

Proof of this filed SEP 14 1921 Jan. 25, 1922

WITNESS MY HAND AND SEAL this 25th day of January, 1921

J. S. Langham State Engineer.

This permit is issued subject to all prior rights on the source and is issued supplementary to permit No. 3712 and in conjunction with permit No. 5922. The amount of water herein granted is placed at 6.4 cubic feet per second, the full statutory allowance for the 640 acres proposed to be irrigated, notwithstanding the fact that, under permit No. 3712, there has already been granted a water right for a portion of this land, and notwithstanding the further fact that permit No. 5922 has this date been issued for a water right for a portion of such land. Such amount of water is allowed so that same can be utilized in the event that there is no water whatever available in the sources described in permits Nos. 3712 and 5922. However, it is understood that the total amount of water which can be diverted from these sources described in these three permits at any one time shall not exceed the statutory allowance for the maximum area of land proposed to be irrigated as described in the three permits. Upon the filing of the proof of beneficial use under permit No. 3712, and the cultural map required in substantiation of the claim made in said proof, the parcels of land shown on the map to be irrigated under and by virtue of said permit No. 3712, shall automatically be eliminated from holding any water right under and by virtue of this permit and the statutory allowance of water for the total area of such parcels of land shall immediately be forfeited and the amount of water for which this permit is granted decreased accordingly. The permittee will be required, at the time of filing proof of beneficial use under this permit, to definitely segregate the parcels of land which obtain water for irrigation purposes from each source described in the two remaining permits, that is, Nos. 5922 and 5960 so that certificates can be issued properly describing the land to which the waters of each source are appurtenant. It is assumed, by the granting of this application that the water herein applied for is not percolating and therefore comes within the jurisdiction of the office of the State Engineer.

A substantial headgate and weir must be installed at or near the point of diversion to facilitate the measurement and control of water. The State reserves the right to regulate the use of the water herein granted at any and all times. It is distinctly understood that applicant agrees to the terms herein contained.
